

Tiger Kite

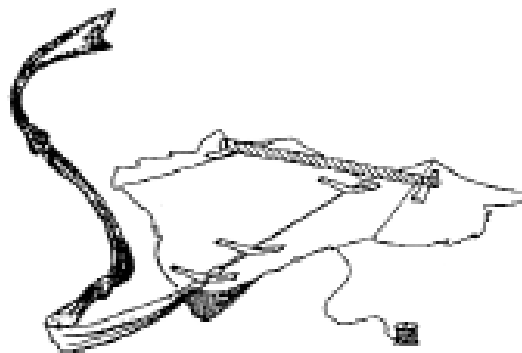

Materials Needed: Copy of kite, crayons or markers, kite string, tape, drinking straws, plastic trash bags, crepe paper or light cloth.

1. Copy pattern. Color and cut out kite. Fold it in half along the line marked 1. The Tiger should face the outside of the folded kite. Spread the kite open, now fold it along the fold lines marked 2, 3, 4, and 5.
2. Tape the kite together as shown in the drawings. Lines 2 and 3 should touch. Tape the drinking straw to the kite where the marks show the straw shape. The straw will form a bridge.

3. Cut strips of plastic trash bag for the kite tail. If you don't have a trash bag, you can use crepe paper or very light cloth. The strips should be about 2 inches wide. Tie the strips together so that the tail is 5 to 8 feet long. Tape the tail to the back of the kite as shown.
4. Punch out the holes on the front of the kite and push kite string through both holes as shown. Make a knot as shown.

Now your kite is ready to take off!
